📄 Case 3

A large **Restaurant & Café** has decided to store information about its customers, orders, employees, and menu items in a database. You are hired as a database designer to prepare an **E-R diagram** based on the following description:

🔹 **Requirements:**

- The café has a number of **employees**, each employee has:
  - EmpID
  - Name (Fname, Lname)
  - Gender
  - Salary
  - Job Title

- The café has a number of **customers**, each customer has:
  - CustomerID
  - Name
  - Phone
  - Email

- The café has a set of **branches**, each branch has:
  - BranchID (unique)
  - BranchName
  - Location

- Each employee works in **only one branch**, but each branch can have many employees

---

- Each branch has **one manager (employee)**
  - Each manager has a **Start Date**

- The café offers a set of **menu items**, each item has:
    - ItemID
    - ItemName
    - Category (Drink / Food / Dessert)
    - Price

- Customers can make **multiple orders**, each order has:
    - OrderID
    - OrderDate
    - TotalAmount

- Each order is handled by **one employee**, but an employee can handle many orders

---

- Each order may contain **multiple items**, and each item can appear in many orders

---

- For each item in an order, we store:
    - Quantity
    - Subtotal

- Each customer may have a number of **addresses**, each address has:
    - AddressID
    - City
    - Street

- Each employee may supervise other employees

🎯 **المطلوب منك:**

1. 🧠 حدد **Entities**
2. 🔗 طلع **Relationships + Cardinality**
3. 📊 ارسم **ERD**
4. 🧱 اعمل **Mapping → Tables**
5. 💻 اكتب **SQL**
